

05.2017 - 10.2020

Hallbergmoos (Munich),
Germany

- **EURO-LOG AG**

Senior Software Developer

- ▶ Engineered Transport and Supply Chain Management logistics platforms handling high-volume data across automotive, e-commerce and retail industries, optimising performance for complex, multi-targeted logistical operations.
- ▶ Integrated fleet tracking for leading automotive companies, producing global inventory reports for thousands of units displayed on maps using HERE maps, with zoom-reactive grouping and interactive detail panels.
- ▶ Worked in two-week agile sprints: picking up tickets, delivering, rolling to production, and feeding learnings back into the next sprint planning cycle.

ABOUT Euro-Log provides Transport, Container and Supply Chain Management systems, shipment tracking and administration for automotive, e-commerce and retail industries.

05.2011 - 04.2017

Buenos Aires, Argentina

- **TecnoCientífica SA**

Project Architect (R&D Department)

- ▶ Applied machine learning to industrial food quality measurement: built predictive models from curated [NIR spectrum → lab result] training datasets, enabling realtime quality assessment from spectral data alone - reducing time-to-result to virtually zero, from costly traditional laboratory chemical analysis to near instant in-plant predictions.
- ▶ Redesigned and unified three product families into a single C# .NET + C++ solution including a desktop application, firmware and communications protocol across PIC18 microprocessors using RS232, CAN and I2C protocols, deployed in both laboratory and realtime in-plant embedded environments, enabling process tuning and immediate quality-gate reaction capacity.
- ▶ Worked directly with technical end users (in-plant operators and laboratory staff at customer sites) during device installation, measurement validation and on-site training, translating complex spectroscopic instrumentation into practical, operational confidence for non-specialist users.

ABOUT TecnoCientífica manufactures quality measurement and control devices for food processing industries, providing laboratory and realtime in-plant embedded solutions using NIR spectroscopy.

06.2009 - 10.2010

Buenos Aires, Argentina

- **Sistelcom SRL**

Hardware & Software Developer

- ▶ Engineered remote electronic lock trackers, satellite-connected temperature control systems for refrigerated freight, GPRS/satellite status reporting and RFID driver login systems for transport realtime security applications.

ABOUT Sistelcom is a telecommunications and operations services company providing infrastructure monitoring, technical support, logistics coordination, and 24/7 operational management services for business clients.

Education

2019 - 2020

- **Udacity.com**

Self-Driving Car Engineer Nanodegree Program. Curriculum covered deep learning (CNNs, transfer learning), computer vision, sensor fusion (LiDAR/camera), localisation (particle filters, SLAM), path planning and PID control - a practical foundation in machine learning and neural networks applied to autonomous systems.

2003 - 2009

- **Instituto Tecnológico de Buenos Aires**

Electronics Engineering (Telecommunications) | 6-year University Diploma

Languages

Spanish (native), German (C2/fluently) and English (C2/fluently). Dual German and Argentine citizen.
