Professional Profile

Electronics Engineer and Senior Full-stack Software Developer with almost 20 years of experience across embedded systems, enterprise platforms, automation and AI-driven solutions, with a strong focus on building technology that remains accessible and practical for end users. Currently leading full project lifecycle initiatives at Brainlab, supporting and integrating solutions for a global organisation with more than 3,000 employees across multiple departments including Finance, HR, Accounting and IT. Acting as an internal technology consultant - identifying adoption opportunities, shaping AI-driven workflows, coaching non-technical colleagues on new tools, and delivering production-ready solutions under real operational and governance constraints.

Alongside my professional work, I am developing an autonomous AI-driven SaaS website generation platform as an independent project, built from prototype to near production-ready state in less than four months. The project reflects both the current capabilities of AI-assisted development and the importance of strong engineering fundamentals when designing scalable and maintainable systems.

Fluent in Spanish, English and German. Dual German and Argentine citizen, based in Munich since 2017.

Work Experience

11.2020 - present
Munich, Germany

- **Brainlab SE**

Senior Business Applications Developer

Power Platform & SharePoint Administrator / Apprenticeship Supervisor

- ▶ Full project ownership from stakeholder requirements and architecture through development, testing and production release - operating as an internal technology consultancy: departments across HR, Finance, Accounting or IT bring ideas, which are assessed, shaped into concrete projects and delivered end-to-end.
- ▶ Integrated the company's full expense management processing, from 3rd party service provider integration and user provisioning to expense booking into SAP. Based on this expenses dataset, also developed a CO₂ emissions estimation tool using an OCR pipeline combined with a locally-hosted LLM (via Ollama) for structured data extraction from unstructured receipt text - a fully self-contained AI pipeline deployed without any external data exposure, ensuring strong security isolation.
- ▶ Building integrations across systems like SAP, SharePoint or Salesforce through a custom ESB (C#), or 3rd party service providers via REST API, implementing scalable workflow automation using Azure services and the Power Platform (PowerApps, Power Automate).
- ▶ Leading Power Platform and SharePoint governance and adoption strategy across the organisation. Coaching and mentoring apprentices (Azubis) on development practices, AI tools and automation workflows - designing practical training that builds confident, independent capability with new technologies.

STACK C# .NET · React · Azure · MS Power Platform · SharePoint · SQL · CI/CD - Ollama

ABOUT Brainlab is a global healthcare technology company innovating in surgery and radiation therapy for 35+ years, developing software and hardware to support healthcare providers in fighting cancer and neurological conditions.

05.2017 - 10.2020

Hallbergmoos (Munich),
Germany

• **EURO-LOG AG**

Senior Software Developer

- ▶ Engineered Transport and Supply Chain Management logistics platforms handling high-volume data across automotive, e-commerce and retail industries, optimising performance for complex, multi-targeted logistical operations.
- ▶ Integrated fleet tracking for leading automotive companies, producing global inventory reports for thousands of units displayed on maps using HERE maps, with zoom-reactive grouping and interactive detail panels.

STACK ASP.NET C# · HTML · JavaScript · SQL

ABOUT Euro-Log provides Transport, Container and Supply Chain Management systems, shipment tracking and administration for automotive, e-commerce and retail industries.

05.2011 - 04.2017

Buenos Aires, Argentina

• **TecnoCientífica SA**

Project Architect (R&D Department)

- ▶ Applied machine learning to industrial food quality measurement: built predictive models from curated [NIR spectrum → lab result] training datasets, enabling realtime quality assessment from spectral data alone - reducing time-to-result to virtually zero, from costly traditional laboratory chemical analysis to near instant in-plant predictions.
- ▶ Redesigned and unified three product families into a single C# .NET + C++ solution including a desktop application, firmware and communications protocol across PIC18 microprocessors using RS232, CAN and I2C protocols, deployed in both laboratory and realtime in-plant embedded environments, enabling process tuning and immediate quality-gate reaction capacity.

STACK C# .NET · C++ · Python · PIC18 · RS232 · CAN · I2C

ABOUT TecnoCientífica manufactures quality measurement and control devices for food processing industries, providing laboratory and realtime in-plant embedded solutions using NIR spectroscopy.

06.2009 - 10.2010

Buenos Aires, Argentina

• **Sistelcom SRL**

Hardware & Software Developer

- ▶ Engineered remote electronic lock trackers, satellite-connected temperature control systems for refrigerated freight, GPRS/satellite status reporting and RFID driver login systems for transport realtime security applications.

STACK C# · C++ · WinForms · XBee · RFID · GPRS

ABOUT Sistelcom is a telecommunications and operations services company providing infrastructure monitoring, technical support, logistics coordination, and 24/7 operational management services for business clients.

Education

2019 - 2020

• **Udacity.com**

Self-Driving Car Engineer Nanodegree Program. Curriculum covered deep learning (CNNs, transfer learning), computer vision, sensor fusion (LiDAR/camera), localisation (particle filters, SLAM), path planning and PID control - a practical foundation in machine learning and neural networks applied to autonomous systems.

2003 - 2009

• **Instituto Tecnológico de Buenos Aires**

Electronics Engineering | 6-year University Diploma

Specialisation: Telecommunications

1995 - 1999

• **Instituto Primo Capraro High School**

Bachiller Mercantil (Economics Specialisation)

Languages

Spanish (native), German (C2/fluent) and English (C2/fluent)

Skills Summary

AI & Machine Learning

Machine Learning

CAN / I2C

ZigBee / RFID / GPS

Personal Projects

- 02.2026 - present

- AI-Driven Website Generation Platform**
Personal initiative. Designed and built a full-stack platform leveraging LLMs and modern AI tooling to generate and deploy production-ready websites from user prompts alone. Covers the complete AI pipeline from prompt engineering to AI agents and skills, structured content generation and automated deployment - built initially to test the concept and help close friends and family, with live production results demonstrating the platform end-to-end.
- 2008 - 2009

- ITBA R&D Awards, Buenos Aires**
1st place (2008): "Pre-processing of images for matrix code (QR codes) decoding in embedded systems."
Mention of honour (2007): "An Image Restoration Method for Natural Scene Images Distorted by Camera Shake Blurring."
