Professional Profile

Electronics Engineer and Senior Software Engineer with almost 20 years of experience across embedded systems, enterprise platforms, automation and AI-driven solutions, with a strong focus on building technology that remains accessible and practical for end users.

Currently leading full project lifecycle initiatives at Brainlab, supporting and integrating solutions for a global organisation with more than 3,000 employees across multiple departments including Finance, HR, Accounting and IT. Acting as an internal technology consultant - identifying adoption opportunities, shaping AI-driven workflows, coaching non-technical colleagues on new tools, and delivering production-ready solutions under real operational and governance constraints.

Alongside my professional work, I am developing an autonomous AI-driven SaaS website generation platform as an independent project. The project reflects both the current capabilities of AI-assisted development and the importance of strong engineering fundamentals when designing scalable and maintainable systems.

Skills Summary

AI & Machine Learning	Machine Learning	LLMs	Prompt Engineering	Local AI	Ollama	AI Strategy & Adoption
	AI Governance	Computer Vision	Convolutional Neural Networks	Sensor Fusion	SLAM	
Software & Cloud	C#/ .NET	JavaScript / Node.js	React	Python	SQL	PostgreSQL
	Azure DevOps	Git	HTML/CSS	MATLAB	CI/CD	Azure
Enterprise Platforms	SharePoint	Power Platform	SAP Integrations	Salesforce (ITSM)		
Methodologies	Agile	Scrum	Product Lifecycle Management	Stakeholder Management	Vendor Coordination	
Hardware & Embedded	C/C++	PIC / LPC Microcontrollers	FPGA / CPLD	CAN / I2C	ZigBee / RFID / GPS	

Work Experience

11.2020 - present

Munich, Germany

- **Brainlab SE**

Senior Business Applications Developer

Power Platform & SharePoint Administrator / Apprenticeship Supervisor

- ▶ Acting as internal IT Product Manager across Finance, HR, Accounting and IT: owning initiative scoping, stakeholder alignment, vendor coordination and end-to-end delivery. Full project ownership from requirements and architecture through development, testing, production release and ongoing support.
- ▶ Integrated the company's full expense management processing, from 3rd party service provider integration and user provisioning to expense booking into SAP. Based on this expenses dataset, also developed a CO₂ emissions estimation tool using an OCR pipeline combined with a locally-hosted LLM (via Ollama) for structured data extraction from unstructured receipt text - a fully self-contained AI pipeline deployed without any external data exposure, ensuring strong security isolation.
- ▶ Building integrations across systems like SAP, SharePoint or Salesforce (ITSM) through a custom ESB (C#), or 3rd party service providers via REST API, implementing scalable workflow automation using Azure services and the Power Platform (PowerApps, Power Automate).
- ▶ Leading Power Platform and SharePoint governance and adoption strategy across the organisation. Coaching and mentoring apprentices (Azubis) on development practices, AI tools and automation workflows - designing practical training that builds confident, independent capability with new technologies.

ABOUT Brainlab is a global healthcare technology company innovating in surgery and radiation therapy for 35+ years, developing software and hardware to support healthcare providers in fighting cancer and neurological conditions.

05.2017 - 10.2020

Hallbergmoos (Munich),
Germany

- **EURO-LOG AG**

Senior Software Developer

- ▶ Engineered Transport and Supply Chain Management logistics platforms handling high-volume data across automotive, e-commerce and retail industries, optimising performance for complex, multi-targeted logistical operations.
- ▶ Integrated fleet tracking for leading automotive companies, producing global inventory reports for thousands of units displayed on maps using HERE maps, with zoom-reactive grouping and interactive detail panels.
- ▶ Worked in two-week agile sprints: picking up tickets, delivering, rolling to production, and feeding learnings back into the next sprint planning cycle.

ABOUT Euro-Log provides Transport, Container and Supply Chain Management systems, shipment tracking and administration for automotive, e-commerce and retail industries.

05.2011 - 04.2017

Buenos Aires, Argentina

- **TecnoCientífica SA**

Project Architect (R&D Department)

- ▶ Applied machine learning to industrial food quality measurement: built predictive models from curated [NIR spectrum → lab result] training datasets, enabling realtime quality assessment from spectral data alone - reducing time-to-result to virtually zero, from costly traditional laboratory chemical analysis to near instant in-plant predictions.
- ▶ Redesigned and unified three product families into a single C# .NET + C++ solution including a desktop application, firmware and communications protocol across PIC18 microprocessors using RS232, CAN and I2C protocols, deployed in both laboratory and realtime in-plant embedded environments, enabling process tuning and immediate quality-gate reaction capacity.

ABOUT TecnoCientífica manufactures quality measurement and control devices for food processing industries, providing laboratory and realtime in-plant embedded solutions using NIR spectroscopy.

06.2009 - 10.2010

Buenos Aires, Argentina

- Sistelcom SRL

Hardware & Software Developer

► Engineered remote electronic lock trackers, satellite-connected temperature control systems for refrigerated freight, GPRS/satellite status reporting and RFID driver login systems for transport realtime security applications.

ABOUT *Sistelcom is a telecommunications and operations services company providing infrastructure monitoring, technical support, logistics coordination, and 24/7 operational management services for business clients.*

Education

2019 - 2020

- Udacity.com

Self-Driving Car Engineer Nanodegree Program. Curriculum covered deep learning (CNNs, transfer learning), computer vision, sensor fusion (LiDAR/camera), localisation (particle filters, SLAM), path planning and PID control - a practical foundation in machine learning and neural networks applied to autonomous systems.

2003 - 2009

- Instituto Tecnológico de Buenos Aires

Electronics Engineering | 6-year University Diploma

Specialisation: Telecommunications

1995 - 1999

- Instituto Primo Capraro High School

Bachiller Mercantil (Economics Specialisation)

Languages

Spanish (native), German (C2/fluent) and English (C2/fluent). Dual German and Argentine citizen, based in Munich since 2017.

Personal Projects

02.2026 - present

- AI-Driven Website Generation Platform

Personal initiative. Designed and built a full-stack platform leveraging LLMs and modern AI tooling to generate and deploy production-ready websites from user prompts alone. Covers the complete AI pipeline from prompt engineering to AI agents and skills, structured content generation and automated deployment - built initially to test the concept and help close friends and family, with live production results demonstrating the platform end-to-end.

2008 - 2009

- ITBA R&D Awards, Buenos Aires

1st place (2008): "Pre-processing of images for matrix code (QR codes) decoding in embedded systems."

Mention of honour (2007): "An Image Restoration Method for Natural Scene Images Distorted by Camera Shake Blurring."
