

Electronics Engineer and Senior Software Engineer with almost 20 years of experience across embedded systems, enterprise platforms and AI-driven solutions, with a consistent focus on making complex technology accessible and practical for the people who actually use it. Currently at Brainlab working as technical consultant and implementation lead for a global organisation of 3,000+ employees — scoping cross-department initiatives, coaching non-technical colleagues through new tools and workflows, delivering integrations end-to-end, and managing the full project lifecycle from requirements to production support. Also directly leading two apprentices through their technical training, responsible for their development, feedback and growing capability.

Experience

- 11.2020 - present

Munich, Germany

Brainlab SE

Senior Business Applications Developer

Power Platform & SharePoint Administrator / Apprenticeship Supervisor

 - ▶ Leading cross-department technology initiatives across Finance, HR, Accounting and IT as internal technical consultant and implementation lead — scoping requirements, aligning stakeholders, coordinating with vendors, and owning end-to-end delivery from architecture through production release and ongoing support. Internal teams are treated as clients: onboarding, training and continued support are part of every delivery.
 - ▶ Integrated the company's full expense management processing, from 3rd party service provider integration and user provisioning to expense booking into SAP. Based on this expenses dataset, also developed a CO₂ emissions estimation tool using an OCR pipeline combined with a locally-hosted LLM (via Ollama) for structured data extraction from unstructured receipt text - a fully self-contained AI pipeline deployed without any external data exposure, ensuring strong security isolation.
 - ▶ Building integrations across systems like SAP, SharePoint or Salesforce (ITSM) through a custom ESB (C#), or 3rd party service providers via REST API, implementing scalable workflow automation using Azure services and the Power Platform (PowerApps, Power Automate). Enterprise identity and user provisioning managed through Azure AD and SSO across connected platforms.
 - ▶ Leading Power Platform and SharePoint adoption strategy and user enablement across the organisation — designing and delivering training sessions for non-technical colleagues that build confident, independent capability. Directly leading two apprentices (Azubis), responsible for their technical development, coaching, feedback and performance throughout their programme.

ABOUT Brainlab is a global healthcare technology company innovating in surgery and radiation therapy for 35+ years, developing software and hardware to support healthcare providers in fighting cancer and neurological conditions.
- 02.2026 - present

Munich, Germany

AI-Driven SaaS Platform

Founder & Principal Engineer

 - ▶ Designed and built a full-stack SaaS platform from concept to working product — sole developer across product definition, technical architecture, infrastructure and delivery. The platform uses LLMs and AI agents to generate and deploy production-ready websites from natural language prompts. Built alongside work and family commitments: a deliberate exercise in operating from the vendor/product side, defining what users need, building what serves them, and iterating based on that feedback loop.

ABOUT AppSolutely is an AI-powered website generation platform. [appsolutely.services](#)

05.2017 - 10.2020

Hallbergmoos (Munich),
Germany

- **EURO-LOG AG**

Senior Software Developer

- ▶ Engineered Transport and Supply Chain Management logistics platforms handling high-volume data across automotive, e-commerce and retail industries, optimising performance for complex, multi-targeted logistical operations.
- ▶ Integrated fleet tracking for leading automotive companies, producing global inventory reports for thousands of units displayed on maps using HERE maps, with zoom-reactive grouping and interactive detail panels.
- ▶ Worked in two-week agile sprints: picking up tickets, delivering, rolling to production, and feeding learnings back into the next sprint planning cycle.

ABOUT Euro-Log provides Transport, Container and Supply Chain Management systems, shipment tracking and administration for automotive, e-commerce and retail industries.

05.2011 - 04.2017

Buenos Aires, Argentina

- **TecnoCientífica SA**

Project Architect (R&D Department)

- ▶ Applied machine learning to industrial food quality measurement: built predictive models from curated [NIR spectrum → lab result] training datasets, enabling realtime quality assessment from spectral data alone - reducing time-to-result to virtually zero, from costly traditional laboratory chemical analysis to near instant in-plant predictions.
- ▶ Redesigned and unified three product families into a single C# .NET + C++ solution including a desktop application, firmware and communications protocol across PIC18 microprocessors using RS232, CAN and I2C protocols, deployed in both laboratory and realtime in-plant embedded environments, enabling process tuning and immediate quality-gate reaction capacity.
- ▶ Worked directly with technical end users — in-plant operators and laboratory staff at customer sites — during device installation, measurement validation and on-site training, translating complex spectroscopic instrumentation into practical, operational confidence for non-specialist users.

ABOUT TecnoCientífica manufactures quality measurement and control devices for food processing industries, providing laboratory and realtime in-plant embedded solutions using NIR spectroscopy.

06.2009 - 10.2010

Buenos Aires, Argentina

- **Sistelcom SRL**

Hardware & Software Developer

- ▶ Engineered remote electronic lock trackers, satellite-connected temperature control systems for refrigerated freight, GPRS/satellite status reporting and RFID driver login systems for transport realtime security applications.

ABOUT Sistelcom is a telecommunications and operations services company providing infrastructure monitoring, technical support, logistics coordination, and 24/7 operational management services for business clients.

Education

2019 - 2020

- **Udacity.com**

Self-Driving Car Engineer Nanodegree Program. Curriculum covered deep learning (CNNs, transfer learning), computer vision, sensor fusion (LiDAR/camera), localisation (particle filters, SLAM), path planning and PID control - a practical foundation in machine learning and neural networks applied to autonomous systems.

2003 - 2009

- **Instituto Tecnológico de Buenos Aires**

Electronics Engineering (Telecommunications) | 6-year University Diploma

Languages

Spanish (native), German (C2/fluently) and English (C2/fluently). Dual German and Argentine citizen.
